

Cirrus

Central Vacuum

C-CB50

The Cirrus C-CB50 Central Vacuum features a powerful, 5.7" 2-stage flow thru flow motor. It comes standard as an inverted bag unit, but has a special stem that allows it to use an optional sealed paper bag. The inverted bag provides a permanent filter. The optional disposable bag is a two-layer paper bag for superior filtration. These paper bags are also inexpensive and easy to throw away, making vacuum maintenance fast and simple. The C-CB50 is constructed from rolled galvanized steel and powder coated for a tough, corrosion-resistant lifetime of use. As with all our Cirrus Vacuums, using the CB50 can help decrease asthma and allergy symptoms by removing dust and allergens from your living areas.

- Motor: Amatek 5.7" 2-Stage Flow Thru**
- Voltage: 120 A.C.**
- Max Amps: 11.3**
- Max Air Watts: 561**
